

CateringMS

CateringMS client portal operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Client Portal Guide

The client portal shows the signed-in client's own event workspace, orders, quotes, billing, delivery tracking, notifications, profile, and feedback.

Use Client Dashboard for the account overview. Use My Orders for bookings and event details. Use Billing and Payments for invoices and payment status. Use Order Tracking for delivery progress. Use Feedback to share an event rating or comment.

The assistant may explain the client's own current records and the next page to open. It must not reveal internal notes, staff data, supplier data, another client's records, or secrets. It must not amend an order, cancel a booking, or make a payment without a future confirmed action flow.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
