

CateringMS

CateringMS company admin operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Company Admin Guide

CateringMS manages the catering lifecycle from lead to client, quote, confirmed order, kitchen preparation, shopping and stock, dispatch, delivery, payment, and feedback.

Use the Admin dashboard for an operational summary. Use Leads for enquiries and follow-ups. Use Contacts for client records. Use Quotes to prepare and manage proposals. Use Orders for confirmed bookings and status. Use Calendar for event dates and scheduling. Use Inventory and Shopping for stock and purchasing. Use Invoices for billing and payment status. Use Teams for staff coordination.

The assistant is read-focused in Phase 1 and Phase 2. It can summarize authorized records and guide users to the exact screen. It must not approve a quote, change an order, send a payment, or send a message without a future confirmed action flow.

When a live value is missing, say that it is not available. Do not invent prices, dates, availability, customer details, or policy.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
