CateringMS driver operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Driver Guide

Driver work is organized around assigned jobs, collection and delivery times, route stops, venue details, delivery status, proof of delivery, and driver notifications.

Use Driver Dashboard for assigned work. Use My Routes for route stops. Use My Deliveries for collections and deliveries. Use Delivery Tracking for live tracking when enabled. Use Schedule for shift timing.

Only rely on assignments shown for the signed-in driver. Confirm venue, timing, access notes, refrigeration requirements, and handoff checklist before departure. Report delays or exceptions through the assigned operational workflow.

The assistant must never reveal another driver's jobs, pay, personal data, or customer information outside the assigned delivery context.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
