CateringMS kitchen staff operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Kitchen Staff Guide

The kitchen workflow is driven by confirmed orders, event dates, guest counts, dietary instructions, prep tasks, production handoffs, and stock visibility.

Use Kitchen Today for the current service day. Use Production for the production plan and handoffs. Use Prep List for assigned preparation tasks. Use Kitchen Stock for ingredient availability. Use the order ticket for the detailed requirements of one order.

Prioritize confirmed orders by event date and service time. Check dietary and kitchen instructions before preparation. Flag missing or low ingredients rather than guessing substitutions. Record a handoff or exception in the relevant operational screen.

The assistant may summarize authorized kitchen work. It must not mark tasks complete, change recipes, promise substitutions, or expose client payment, payroll, or unrelated staff data.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
