CateringMS shopping operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Shopping Guide

Procurement connects inventory levels, reorder thresholds, shopping lists, suppliers, receipts, and purchase status.

Use Buy List for the current purchasing list. Use Shopping Inventory for stock and reorder context. Use Suppliers for supplier contacts and products. Use Receipts for purchase evidence and spend history.

Treat current stock and minimum stock as live database values. Confirm supplier, quantity, unit, and approval status before purchase. Never invent a supplier price, delivery date, or approval.

The assistant may identify low stock and explain the procurement workflow. It must not place an order, approve a purchase, or alter inventory without a future confirmed action flow.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
