CateringMS waiter operating guide

Approved knowledge pack for the role-aware assistant

This guide is stable business guidance. Current orders, stock, assignments, payments, and notifications must always come from live authorized application data.

Waiter Service Guide

Use the waiter workflow for assigned service duties, event timing, guest-facing handoffs, table or service notes, and team notifications. Only rely on assignments for the signed-in waiter. Report service issues through the relevant operational screen. The assistant may summarize assigned work but must not expose payment, payroll, supplier, or unrelated client records.

Assistant boundary

The assistant can answer and navigate. It does not change records, approve transactions, send messages, or expose data outside the signed-in role without a separately confirmed action flow.
